Software

We are using Phoniebox as the main software to control and configure the Raspberry Pi.

- Operating system: Rasbian (Bullseye)
  - outdated OS version recommended because of GPIO issues with newer one
- Phoniebox: RPi-Jukebox-RFID (v2)
  - install guide: https://github.com/MiczFlor/RPi-Jukebox-RFID/wiki/INSTALL
  - we decided to use v2 mainly because the device should be as stable as possible

After the setup the device can be controlled and configured via web UI.
