

Software

We are using [Phoniebox](#) as the main software to control and configure the Raspberry Pi.

- Operating system: Rasbian (Bullseye)
 - outdated OS version recommended because of GPIO issues with newer one
- Phoniebox: [RPi-Jukebox-RFID](#) (v2)
 - install guide: <https://github.com/MiczFlor/RPi-Jukebox-RFID/wiki/INSTALL>
 - we decided to use v2 mainly because the device should be as stable as possible

After the setup the device can be controlled and configured via web UI.
